

1. ...and Made of Diamond

(A/T/B) I know a world with a million moons

I know a world with a million moons, with a million moons (repeat 3 times)

(S/A) //There are atomic nuclei, there are atomic nuclei

There are atomic nuclei a mile across,

There are atomic nuclei a mile across// (repeat)

There are atomic nuclei that rotate thirty times a second (5 times)

//There are atomic nuclei, there are atomic nuclei

There are atomic nuclei a mile across,

There are atomic nuclei a mile across//(repeat)

There are atomic nuclei that rotate thirty times a second (5 times)

(Solo) I know of a sun the size of the earth

And made of diamond, made of diamond.

2. I'm Your Moon

They invented a reason
That's why it stings
They don't think you matter
Because you don't have pretty rings
I keep telling you I don't care
I keep saying there's one thing they can't change

I'm your moon
You're my moon
We go round and round
From out here, it's the rest of the world that looks so small
Promise me
You will always remember who you are

Let them shuffle the numbers
Watch them come and go
We're the ones who are out here
Out past the edge of what they know
We can only be who we are
It doesn't matter if they don't understand

I'm your moon
You're my moon
We go round and round
From out here, it's the rest of the world that looks so small
Promise me
You will always remember who you are

Who you were long before
They said you weren't anymore

Sad excuse for a sunrise
It's so cold out here
Ice and silence and dark skies
As we go round another year
Let them think what they like, we're fine
I will always be right here next to you

I'm your moon
You're my moon
We go round and round
From out here, it's the rest of the world that looks so small
Promise me
You will always remember who you are

3. Black Hole

Don't take me near that black, black hole.
Don't take me near to that place.
If you go there, leave me at home.
I'm too young to die in space...
Once you're near to that hole there's no resisting its pull,
So if you're determined to still go there,
Go there alone, you mad fool.

Picture a star so big and old it can't support its own weight,
Shrinks and collapses into a hole, an irreversible fate...
Gets so small it ain't there, just gravitational pull,
So if you're determined to still go there,
Go there alone, you mad fool.

As you get nearer you'll fall and you'll fall, faster and faster you'll go.
As you approach velocity of light time will slow down and will grind to a halt.
So... don't send a postcard 'cause it won't come,
Even first class post won't get here.
Don't try to phone, you won't get through, not in a billion years.
Now listen, vacuum cleaners can't compete with what that black hole can do.
It swallows electromagnetic waves and soon it will swallow you!

As you get nearer you'll fall and you'll fall, faster and faster you'll go.
As you approach velocity of light time will slow down and will grind to a halt.
So... don't send a postcard 'cause it won't come,
Even first class post won't get here.
Don't try to phone, you won't get through, not in a billion years.
Now listen, vacuum cleaners can't compete with what that black hole can do.
It swallows electromagnetic waves and soon it will swallow you!

4. Moon

No flowers, no trees, no water in the dusty seas,
No clouds in the sky, nothing ever lives, nothing dies,
No air, no sound, no breezes blowing leaves across the ground,
No joy, no fear, nobody there to shed a tear,
On the moon... (x8)
[repeat whole song]

5. 93 Million Miles

Ninety-three million miles away,
That's how far the sun's away that gives us light and warms the day.
Ninety-three million miles or so,
That ain't a long way for the light to go.
Riding on a light beam, if we could, it wouldn't take us very long.
Riding on a light beam, we'd be there by the time
We'd finished singing this song if we took it slowly...

Ninety-three million miles away,
That's how far the sun's away that gives us light and warms the day.
Ninety-three million miles or so,
That ain't a long way for the light to go.
If the sun went out we'd not last long, we couldn't live without its glow.
But that isn't very likely 'cause the sun's quite young.
It's got another six billion years or so to go...

Ninety-three million miles away,
That's how far the sun's away that gives us light and warms the day.
Ninety-three million miles or so,
That ain't a long way for the light to go.
Is it waves, is it particles? Nobody quite knows.
It's the ultimate speed limit anything can go.
At a million miles every five seconds, no,
It ain't a long way for the light... to...
Go to go to go, go to go to go, go to go to go, go to go to go, GO!

6. Planets (Intro)

Bang in the middle there's an ordinary star we call The Sun
Over ninety-nine percent of the solar system's mass is in that one.
Four inner planets orbit relatively close, Earth's third
Then comes a belt of rocky asteroids so we've heard
Four outer planets, gassy giants each encircled by a ring
Then the Kuiper Belt of objects mainly made of ice is orbiting
Poor old Pluto no longer is a planet
Astronomers got together and decided to ban it
It's a dwarf planet now, unlike before
Ceres and Eris are one-two more
Way out beyond in deep, deep space
Trillions of other bodies orbit in that lonely race.
It's our solar system, it's our solar system, it's our solar system, solar system home (2x)

Eight Planets (round)

Eight planets orbiting the sun - What are their names, one by one?
Mercury is the first we see, Venus second and the Earth makes three, and then there's
Mars, Mars, the god of war - Jupiter and Saturn make one, two more.
Uranus is the seventh planet - Neptune is last and completes the set.

7. Stargazing

When skies are clear and I can see the stars,
I seek a place where I can be alone.
Then I am just a fleeting thought in a random universe.
This is the greatest feeling that I know.

When I lie down beneath the spring-time sky,
Counting the shooting stars that stream across the night,
The ups and downs of this small world are dissolved in children's dreams.
This is the greatest feeling that I know.

See how the planets circle in the void,
As we perform our petty dances here below.
We could burn our Earth to smoke and ash and the moon would shed no tears.
This is the greatest feeling that I know.

8. Red Giant

Melody 2: Red giant in black, black sky
Might any moment blow sky high.
Red giant is a time bomb,
Supernova might be coming,
Let's be gone!

Melody 1: When a star is very old,
It swells up big, gets relatively cold,
Then at any time explodes
Into a supernova!

Melody 2: Red giant in black, black sky
Might any moment blow sky high.
Red giant is a time bomb,
Supernova might be coming,
Let's be gone!

Melody 1: When a star is very old,
It swells up big, gets relatively cold,
Then at any time explodes
Into a supernova

9. Noctilucence

When sun falls, flash of tepid green,
Ghostly whispers glow in the western sky.
In the mesosphere electric blue white clouds
Linger in the realm 'tween precious air and space.
Are you the wings of feathered angels
Come to us epiphany,
Kissing us goodnight into peace of sleep
When stars appear, tiny prickled gems
Scintillating white against the cold dark blue,
Noctilucent clouds ice encrusted dust
Hover in our fragile husk, a mystery
Tendrils of Greed's tangled hair,
Prophet child of poisoned air,
Are you the frigid breath of our kiss of death?

10. Auroras

Clear October northern night,
Sun stretches tongue,
Flickering a swirling flame,
Goddess of the dawn.
Twisting turning ripples dance,
Pinwheel spinning light,
Cascades colors from the sky,
Aurora Borealis.
(repeat)

Wavy veils of tourmaline
Swaying in the sky.
Ninety three million miles
Blows the solar wind.
Paints a liquid drape of green
In the ionosphere.

11. An Immensity of Others

We live on one world,
On one world amidst
An immensity of others
We live on one world.

12. Our World

You and I share a single place,
A private universe, tiny point in space.
Complex world of water, stone and air...
Necessary water, stone and air.
Turning while we whirl around the sun...
Spinning as we whiz around the sun.

You and I share a biosphere.
Terrestrial abode - all we have is here.
Filled with life, filled up with strife - the human comedy.
Insulated, isolated, eons old - a fragile home called Earth.

You and I share a blue-green place,
A private universe, our own realm in space.
Complex world of water, stone and air...
Necessary water, stone and air.
Turning while we whirl around the sun...
Spinning as we whiz around the sun.

Spinning on our axis while we orbit 'round the sun.
